**FOR IMMEDIATE RELEASE**

**March 31, 2004**

exCel Cosmeceuticals, Inc. today announced an additional patent (US Patent #6,703,030) has been awarded to the company that further validates the uniqueness of their AFA products. This most recent patent is based on Dr. Marvin Klein's extensive research, which led to the creation of a molecule that identifies treated amino acids as tri-carboxylic acids. According to Martin Davidson, President of exCel Cosmeceuticals, Inc., "This new patent further validates the previous patent issued on our AFA products (U.S. Patent #6,197,317), confirming the potent antioxidant and anti-aging capabilities of our proprietary amino acid formulation."

exCel Cosmeceuticals was founded by dermatologist, Marvin E. Klein, MD, who invented the formulations used in the AFA products. The acids used in the products are based on the natural moisture system of the human skin. Unlike glycolic acids, which produce dryness and visible exfoliation, the formulation used in the AFA products effect an invisible peeling and increase, rather than decrease, the moisture retaining capabilities of the skin. AFA products are effective in improving the appearance of: fine lines; photopigmentation; and, in facial and body skin rejuvenation. The unique properties of the AFAs make them appropriate for all skin types and colors and significantly reduce or eliminate the irritation commonly associated with other acids, products, or actives used in facial rejuvenation treatments.

exCel Cosmeceuticals distributes their proprietary AFA products to physicians worldwide. For further information, visit the company's Website: [www.xlafa.com](http://www.xlafa.com). Contact: Martin Davidson, President Phone: 800.453.5150 Email: [Martyd@xlafa.com](mailto:Martyd@xlafa.com)
